Engineering Aspects of Failure and Prevention	1	Industry Perspectives on Failure and Life Assessment of Components	51
<i>James F. Lane, Rimkus Consulting Group, Inc.</i>		Structural Design Philosophies	52
Materials Selection for Failure Prevention	3	Life-Limiting Factors	56
<i>Brett A. Miller, IMR Test Labs</i>		Role of the Failure Investigator	59
Design and Failure Prevention	4	Role of Nondestructive Inspection	62
Materials Selection in Design	8	Specific Life-Assessment Methodologies	62
Materials Selection for Failure Prevention	14	Brittle Fracture Assessment and Failure Assessment Diagrams	69
Materials Selection and Failure Analysis	15	<i>Brian Macejko, The Equity Engineering Group, Inc.</i>	
Engineering Design Process Investigation in a Failure Analysis	20	Introduction	69
<i>Steven Kushnick, Steven B. Kushnick, P.E., Inc.</i>		Why Evaluate Brittle Fracture?	69
The Mode of Failure	20	Historical Failures	69
The Root Physical Cause of Failure	20	Key Components	70
The Root Cause of Failure	20	Assessing Susceptibility to Brittle Fracture in Process Equipment	72
The Engineering Design Process	21	Case Studies	73
Failure Modes and Effects Analysis	21	Analysis Methods for Probabilistic Life Assessment	77
The Importance of Considering the Engineering Design Process	21	<i>Robert Kurth and Cédric Sallaberry, Engineering Mechanics Corporation of Columbus</i>	
Management Influences	26	Introduction to Probabilistic Analysis	77
The Role of the Engineering Expert in Product Liability Litigation	30	Methodology Construction for Probabilistic Structural Design Codes	78
<i>Farheen S. Khan, Rimkus Consulting Group Inc.</i>		Evaluation of Probability of Failure	83
Product Liability Litigation and the Expert Witness	30	Sensitivity and Uncertainty Analysis for Probabilistic Code Results	85
Admissibility of Expert Opinions	30	Methodology Summary	87
Considerations of How to Evaluate Data	31	Case Studies	88
Factual Evidence—Testimony, Witness Statements, and Accident Reports	31	Fatigue-Life Assessment	98
Mandatory and Voluntary Standards	31	<i>Phillip E. Prueter, The Equity Engineering Group, Inc.</i>	
Physical Evidence—Product Inspection and Testing	31	Historical Overview and Industry Failures	98
Medical Records	32	Fatigue Fundamentals and Stress-Based Methods	100
Scientific Literature	32	Evaluating Fatigue at Welded Locations	103
Evaluating Design Decisions	32	Types of Fatigue and Damage Morphology	105
Was the Product Dangerous as Designed and Did it Pose an Unreasonable Risk of Harm?	32	Cyclic Plasticity, Multiaxiality, and the Neuber Correction	108
Environment of Use	33	Strain-Based Fatigue Methods	110
Considering the User’s Contribution—Human Factors	33	Fracture-Mechanics-Based Crack Growth Approaches	110
Reports of Opposing Experts	34	Design by Analysis and Stress Classification	111
Report of Findings	34	API 579-1/ASME FFS-1, Fitness-for-Service Procedures	112
Deposition Testimony	34	Ratcheting and the Bree Diagram	117
Trial Testimony	34	Cycle-Counting Techniques	118
Reliability-Centered Maintenance	36	High-Cycle Welded Fatigue Considerations	118
<i>Dana Netherton, Athos Corporation</i>		Fatigue Damage Mitigation—Design Considerations	119
History of Reliability-Centered Maintenance	36	Fatigue Case Studies	122
Overview of the Reliability-Centered Maintenance Process	38	Assessment of Damage to Structures and Equipment Resulting from Explosion, Fire, and Heat Events	134
Failure Modes and Effects Analysis	38	<i>Adrian Pierorazio, Nicholas E. Cherolis, Michael Lowak, Daniel J. Benac, and Matthew T. Edel Baker Engineering and Risk Consultants, Inc.</i>	
Failure Management Policies and “Technical Feasibility”	41	Preliminary Data Collection and Preparation	134
Failure Consequences and Policy Worthwhileness	42	Explosion Damage Assessment	135
Failure Management Policy Selection	44	Fire and Heat Damage Assessment	138
Managing and Resourcing the Reliability-Centered Maintenance Process	45	Elevated-Temperature Life Assessment	146
Conclusions	46	<i>Arun Sreeranganathan and Douglas L. Marriott (Deceased), Strun Engineering Services, Inc.</i>	
Structural Life-Assessment Methods	49	Design for Creep	146
<i>Daniel J. Benac, Baker Engineering and Risk Consultants, Inc.</i>		Creep Curve	146
Failure Prevention through Life Assessment of Structural Components and Equipment	51
